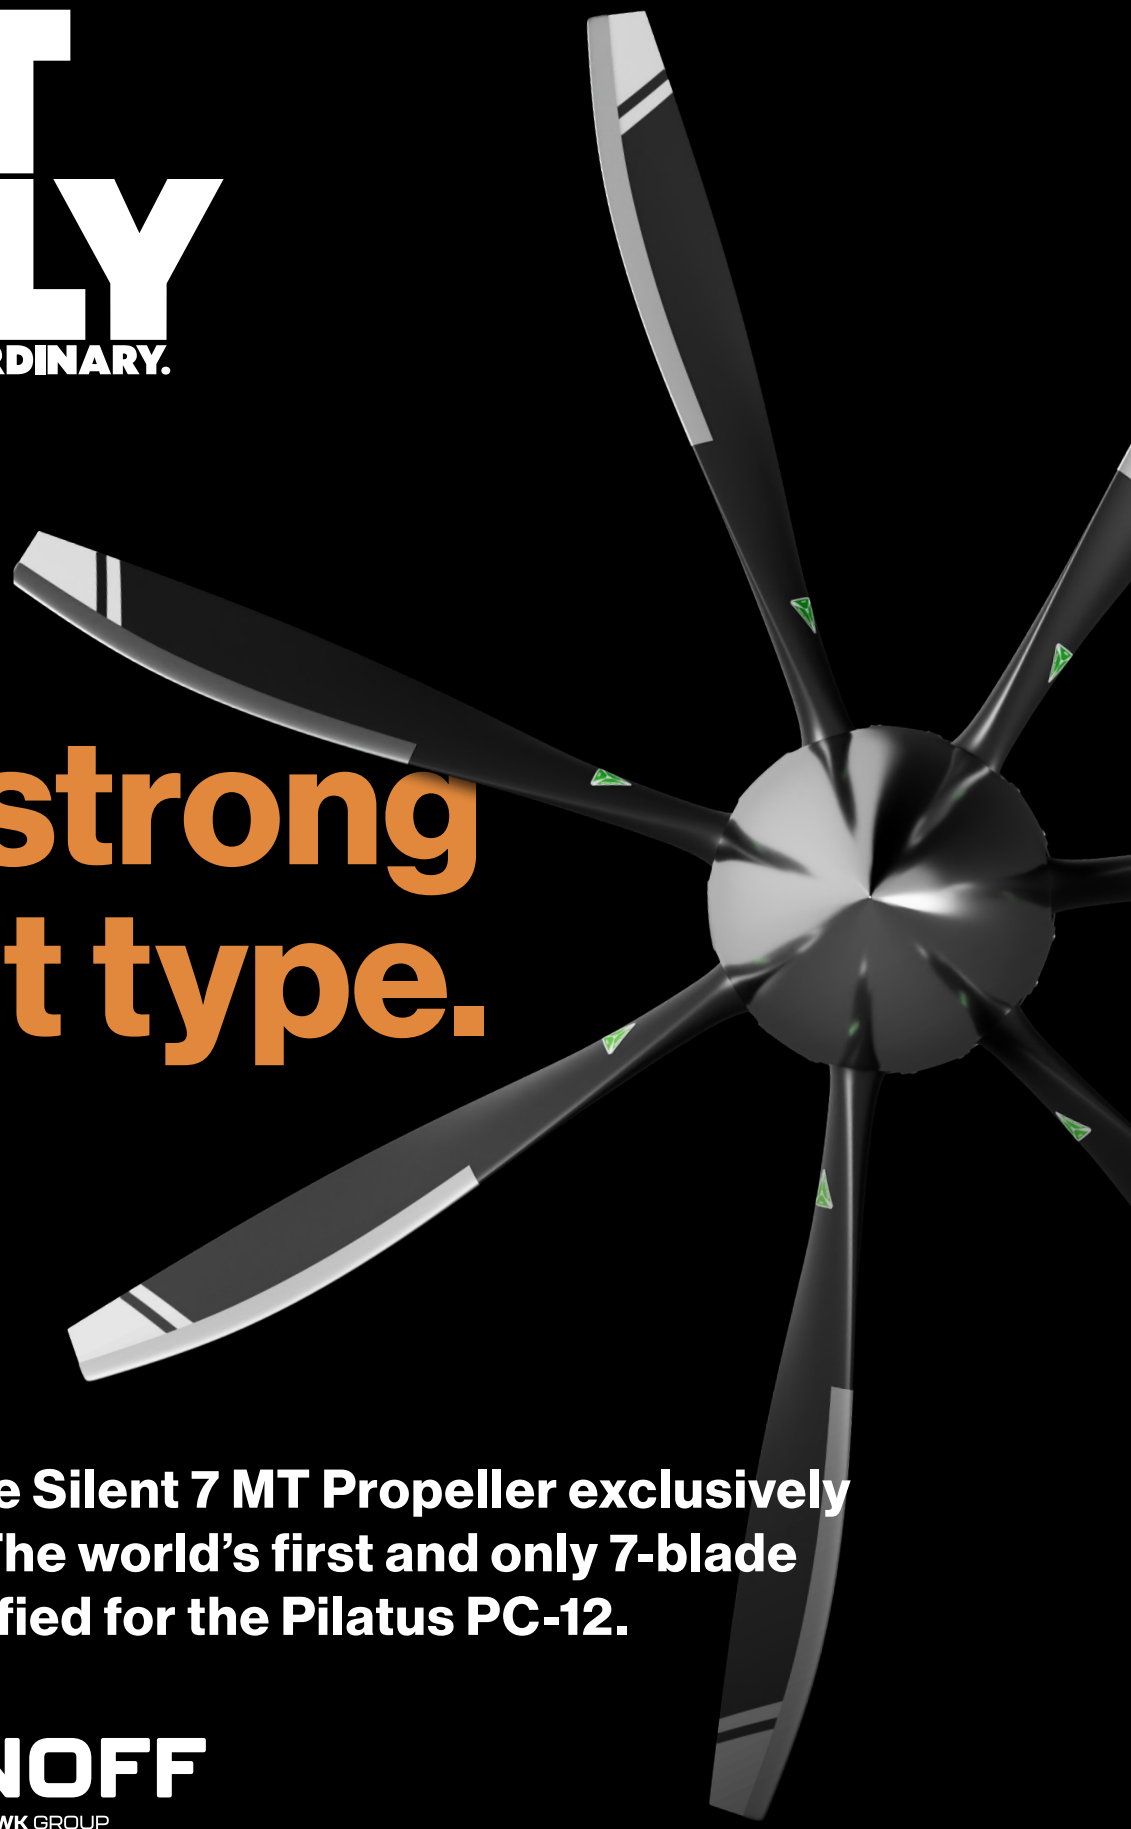
OUT FLY
THE ORDINARY.



The strong silent type.

Introducing the Silent 7 MT Propeller exclusively from Finnoff. The world's first and only 7-blade propeller certified for the Pilatus PC-12.

OUT FLY
THE ORDINARY.

Give yourself more runway.

More blades means more performance. The MT Silent 7-Blade is significantly more powerful and quieter than other propellers. It reduces ground roll distance by 10%* and take-off distance over 50' obstacle by 15%*. So you can get in and get out of more places faster and safer than ever before.

*approximate; AFMS amended when compared to other 5-blade propellers

Hear that?

The MT 7-Blade is quieter by up to 7 dB(A) inside the aircraft and about 4 dB(A) outside. Your passengers will have a more comfortable ride, and your neighbors will be a little friendlier.

Easy to install. Easy to repair.

No engine modifications needed. Composite materials means blades can easily be repaired or replaced.

Do more with more.

Climb quicker, cruise quieter, and get home sooner.
And when it comes time to sell your PC-12, you get more there, too.

Seven composite blades give you so many more advantages:

- Complies with strict German 2010 Landing Site Noise Protection Ordinance for unrestricted airport operations in Germany and other European countries
- Bonded nickel alloy leading edge for best erosion protection
- More ground clearance for less blade tip erosion and damage
- Easily repairable blades
- Unlimited blade life
- No engine modifications necessary
- Almost vibration free propeller operations

The world's first 7-bladed Unducted Prop FAN MT-Propeller is now supplemental type certified on the Pilatus PC-12 powered by a Pratt & Whitney PT6A-67B or PT6A-67P propeller turbine.

Ready to become the strong silent type?

Finnoff is part of The Blackhawk Group, your one-stop, best-in-class service and support network with everything you need to outfly the ordinary.

Outfly the Ordinary.

Contact us today to learn how an MT 7-Blade upgrade gives you the ability to leave ordinary behind.
